

Wideband Distributed Amplifier, DIE

1 - 19 GHz

ENGDA00160

Rev. V1

Features

- Wideband Performance
- High Linearity:
7 dBm IIP3 @ 6 V; 9 dBm IIP3 @ 8 V
- Positive Gain Slope: 11 dB
- Input/Output Return Loss: 14 dB
- Noise Figure: <3.5 dB, 4 - 18 GHz
- 3 V & 10 V Bias Operation
- Die Size:
2.93 x 2.00 x 0.1 mm
0.115 x 0.079 x 0.004 inch
- RoHS* Compliant

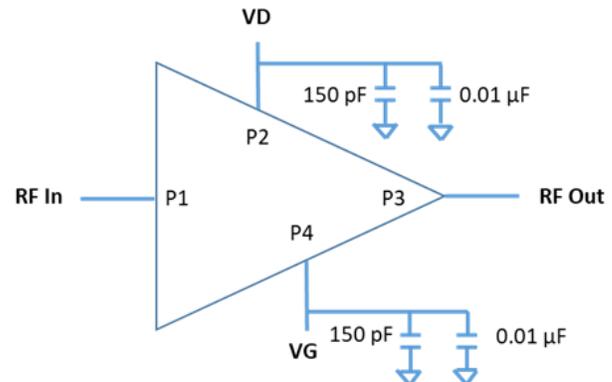

Applications

- Military EW & SIGINT
- Receiver or Transmitter
- Telecom Infrastructure
- Space Hybrids
- Test & Measurement Systems

Description

The ENGDA00160 is a wideband, linear GaAs MMIC distributed amplifier die which operates from 1 to 19 GHz. The design is 50 ohm matched and does not require external bias coil inductors. The amplifier delivers 11 dB gain with >1 dB positive gain slope across the band over a wide drain voltage range (3 V to 10 V). Noise figure is <3.5 dB across 4 - 18 GHz for bias voltages between 4 and 8 V. The amplifier has gold backside metallization and is designed to be silver epoxy attached. The RF interconnects are designed to account for wire bonds and external microstrip flares for optimal integrated return loss. No additional ground interconnects are required.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

1. Exceeding any one or combination of these limits may cause permanent damage to this device.
2. MACOM does not recommend sustained operation near these survivability limits.

External I/O Microstrip Flare Dimensions (on 5-mil Alumina) and I/O Bond Wire Inductances for Optimum Insertion and Return Loss Performance

S-parameters can be supplied at DIE level such that optimal flare dimensions can be made for the substrate connection medium used (if different from 5-mil Alumina).

Pad Flare Dimension	Flare Width x-dim, (μm)	Flare Length y-dim, (μm)	Wire Inductance	Wire Length (μm)	# of Wires
RF Input	190	346	0.25	533	2
RF Output	137	437	0.28	635	2

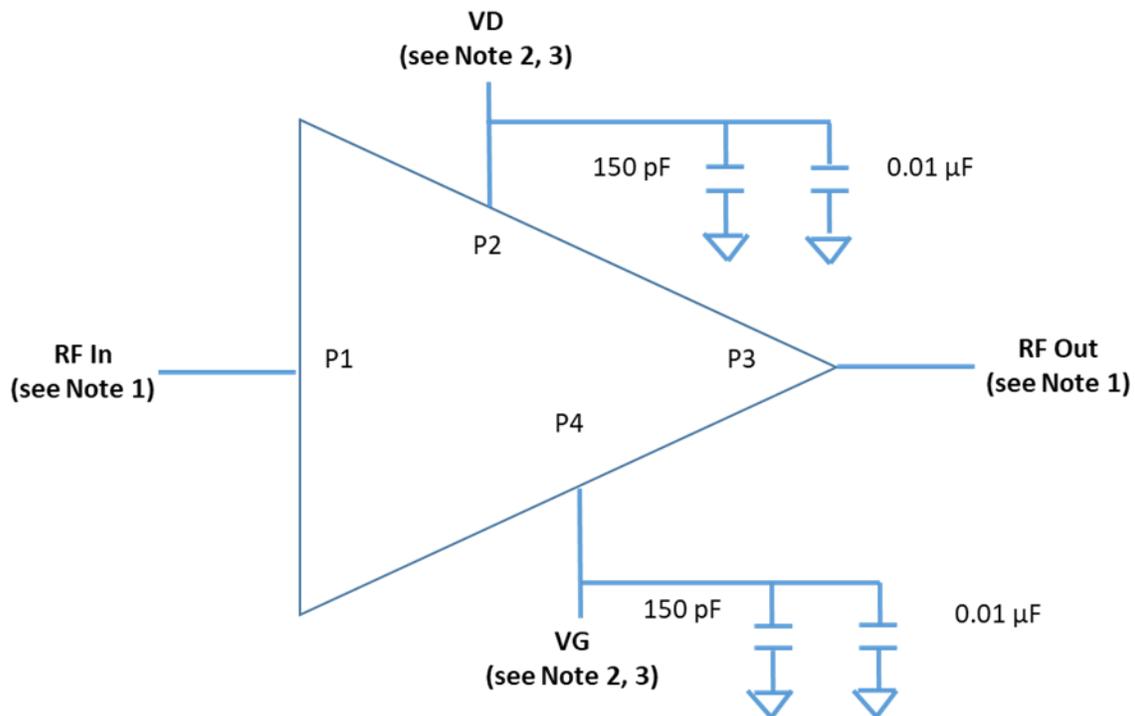

Notes:

- To achieve bond wire inductance noted, bond the number of wires shown in parallel from each external flare to each associated MMIC RF bond pad as shown above.
- Gold Wire Details:
 - Diameter: 25.4 μm (1 mil)
 - Spacing: 4 mils ($\sim 100 \mu\text{m}$) typical
 - Height above Ground: 8 mils ($\sim 200 \mu\text{m}$) typical (wedge bonds)
- Wire Length is total length if the wire were made perfectly straight.

Assembly Guidelines

The backside metallization is RF/DC ground. Attachment should be accomplished with electrically and thermally conductive epoxy only. Eutectic Attach is not recommended though product can be made that supports. This device supports high frequency performance. Care should be made to following the wirebond dimensions as shown in the flare diagram.

Application Circuit and Turn-on Procedure

1. Internal blocking capacitors on RF in/out ports (P1 and P2).
2. Gate Voltage (V_G) must be applied prior to Drain Voltage (V_D)
3. Drain Voltage (V_D) must be removed prior to Gate Voltage (V_G).
4. Performance is optimized with V_D set in the 4 - 8 V range.
