# Digital Attenuator, 2 dB LSB, 4-Bit
# 30 dB, DC - 55 GHz

**ΛMACOM**®

## Features

- 4-Bit, 2 dB LSB, 30 dB Range
- Insertion Loss:
    - 2.0 dB @ 26.5 GHz
    - 3.1 dB @ 50 GHz
- P0.1 dB: 26dBm @ 40 GHz
- Integrated CMOS Compatible Driver
- Compatible with 1.8 V CMOS logic
- Parallel or Serial (P/S) Control
- Low DC Power Consumption
- Lead-Free 3 mm 20-Lead Package
- RoHS* Compliant

## Applications

- ISM, Test and Measurement
- Multi Market

## Description

The MAAD-011049 is a wide band 4-bit, 2 dB step MMIC digital attenuator in a lead-free 3 mm, 20 lead surface mount laminate package. This device is ideally suited for use where high accuracy, very low power consumption, and low intermodulation products are required.

This attenuator is controlled with either a SPI compatible serial interface or a 4 bit parallel word. SEROUT is the SERIN delayed by 6 clock cycles which can be used in daisy-chain operation.

## Ordering Information[1,2]

| Part Number | Package |
|---|---|
| MAAD-011049-TR0500 | 500 piece reel |
| MAAD-011049-SB1 | Sample Board |

1. Reference Application Note M513 for reel size information.
2. All sample boards include 3 loose parts.

## Functional Schematic

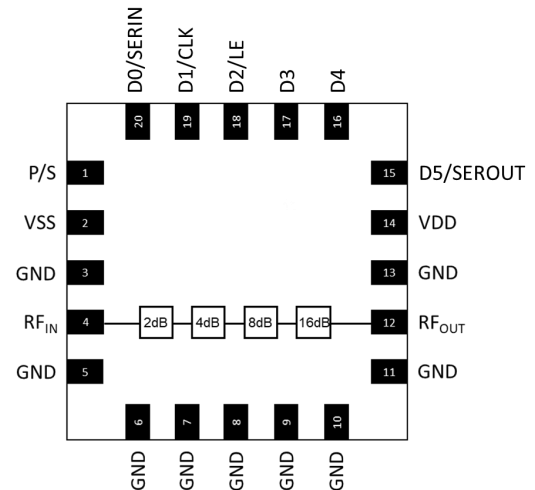

## Pin Names[3]

| Pin # | Function |
|---|---|
| 1 | Parallel/Serial Selection |
| 2 | Negative Supply |
| 3, 5 - 11, 13 | Ground |
| 4 | RF Input |
| 12 | RF Output |
| 14 | Positive Supply |
| 15 | 16 dB bit or Serial Output |
| 16 | 8 dB Bit Control |
| 17 | 4 dB Bit Control |
| 18 | 2 dB Bit or LE |
| 19 | Clock |
| 20 | Serial Input |
| 21 | Ground Paddle[4] |

3. MACOM recommends connecting unused package pins to ground.
4. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

DC-0024024

## Pin Description

| Pin # | Name | Description |
|-------|------|-------------|
| 1 | P/S | Selection of serial or parallel control mode |
| 2 | VSS | Negative supply Input |
| 3, 5 - 11,13 | GND | Ground. The GND pins must be connected to the RF and DC ground of the PCB |
| 4 | $RF_{IN}$ | Attenuator Input. The $RF_{IN}$ pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking |
| 12 | $RF_{OUT}$ | Attenuator Output. The $RF_{OUT}$ pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking |
| 14 | VDD | Positive supply Input |
| 15 | D5/SEROUT | Parallel control input for 16 dB attenuation bit or serial input control delayed by 6 clock cycles |
| 16 | D4 | Parallel control input for 8 dB attenuation bit |
| 17 | D3 | Parallel control input for 4 dB attenuation bit |
| 18 | D2/LE | Parallel control input for 2 dB attenuation bit or latch enable input of serial control mode |
| 19 | D1/CLK | Clock input of serial control mode |
| 20 | D0/SERIN | Control word input of serial control mode |
| 21 | Pad | Exposed Pad. The exposed pad must be connected to the RF and DC ground of the PCB |

DC-0024024

## AC Electrical Specifications:
$T_A$ = 25°C, VDD = +3.3 V, VSS= -3.3 V[5], $P_{IN}$=0 dBm,  $Z_0$ = 50 Ω

| Parameter | Test Conditions | Units | Min. | Typ. | Max. |
|---|---|---|---|---|---|
| Reference Insertion Loss | DC - 18.0 GHz<br>18.0 - 26.5 GHz<br>26.5 - 40.0 GHz<br>40.0 - 50.0 GHz<br>50.0 - 55.0 GHz | dB | — | 1.5<br>2.0<br>2.3<br>3.1<br>3.0 | 2.6<br>3.2<br>3.8<br>4.7<br>— |

## Recommended Operating Conditions

| Parameter | Symbol | Unit | Min. | Typ. | Max. |
|---|---|---|---|---|---|
| Input Power, 100 MHz to 40 GHz ($RF_{IN}$ and $RF_{OUT}$)[6] | - | dBm | — | — | 26 |
| Positive Supply Voltage | VDD | V | +3.15 | +3.3 | +3.45 |
| Negative Supply Voltage | VSS | V | -3.45 | -3.3 | -3.15 |
| Operating Temperature[7] | $T_c$ | °C | -40 | 25 | 105 |

## Absolute Maximum Ratings[8,9]

| Parameter | Symbol | Unit | Min. | Max. |
|---|---|---|---|---|
| Input Power, 100 MHz to 40 GHz ($RF_{IN}$ and $RF_{OUT}$)[6] | - | dBm | — | 27 |
| Positive Supply Voltage | VDD | V | -0.3 | 3.6 |
| Negative Supply Voltage | VSS | V | -3.6 | +0.3 |
| Logic Input Voltage | $V_I$ | V | -0.2 | +2 |
| Operating Temperature[7] | $T_c$ | °C | -40 | 105 |
| Storage Temperature | - | °C | -65 | 150 |

6. $T_{PADDLE}$ = +105°C. See power derating curve for details.
7. Temperature of the exposed pad.
8. Exceeding any one or combination of these limits may cause permanent damage to this device.
9. MACOM does not recommend sustained operation near these survivability limits.

## Power Derating Curve

## Handling Procedures

Please observe the following precautions to avoid damage:

### Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

| Parameter | Rating | Standard |
|---|---|---|
| Human Body Model (HBM) | Class 1B | ESDA/JEDEC JS-001 |
| Charged Device Model (CDM) | Class C3 | ESDA/JEDEC JS-002 |

DC-0024024

## Modes of Operation:
## Serial and Direct Parallel

### Serial Mode

The serial control interface (SERIN, CLK, LE, SEROUT) is compatible with the SPI protocol. SPI mode is activated when P/S is kept high. The 6-bit serial word must be loaded with the MSB first. After shifting in the 6 bit word, a rising edge on LE will set the attenuator to the desired state. While LE is high the CLK is masked to protect the data while implementing the change. SEROUT is SERIN delayed by 6 clock cycles.

When P/S is low, the serial control interface is disabled. When P/S is set high, pins 18, 19, & 20 have the LE, CLK, and SER IN functions, respectively.

In serial mode operation, the outputs will stay constant while LE is kept low.

### Direct Parallel Mode

The parallel mode is enabled when P/S is set low. In the direct parallel mode, the phase shifter is controlled by the parallel control inputs directly. When P/S is set low, pin 18 has the D2 functions.

### Mode Truth Table

| P/S | LE | Mode |
|-----|-----|------|
| 1 | X | Serial |
| 0 | N/A | Direct Parallel |

### Truth Table[10]

| D5 | D4 | D3 | D2 | D1 | D0 | Attenuation (dB) |
|----|----|----|----|----|----|------------------|
| 0 | 0 | 0 | 0 | X | X | Reference IL |
| 0 | 0 | 0 | 1 | X | X | 2 |
| 0 | 0 | 1 | 0 | X | X | 4 |
| 0 | 1 | 0 | 0 | X | X | 8 |
| 1 | 0 | 0 | 0 | X | X | 16 |
| 1 | 1 | 1 | 1 | X | X | 30 |

10. "0" = $V_{IL}$,  "1" = $V_{IH}$.

## Lead-Free 3 mm, 20-Lead Laminate Package†

† Reference Application Note S2083 for lead-free solder reflow recommendations.
 Meets JEDEC moisture sensitivity level 3 requirements in accordance to JEDEC J-STD-020D.
 Plating is 100% NiPdAg over copper.
