Description

The MAAL-011155 is an easy to use, wideband ultra low phase noise distributed amplifier in a lead-free 4 mm 16-lead PQFN package. It operates from 6 to 12 GHz and provides -167 dBc/Hz phase noise, 15.6 dB of linear gain, 20 dBm of P1dB, and 5 dB of noise figure. The input and output are fully matched to 50 Ω with typical return loss of 16 dB.

The RF output port is DC blocked. Amplifier control is available through the use of a control circuit.

This product is fabricated using a low phase noise HBT process which features full passivation for enhanced reliability.

The MAAL-011155 can be used as a low noise amplifier stage for signal generation applications. This device is ideally suited for Test and Measurement, EW, ECM, and Radar applications where ultra low phase noise and drive power is required.

Application Schematic

Operation

The technology is HBT; so, the turn-on and turn-off procedure is fairly simple.

To turn-on simply:

1. Apply +5 V to V_{CC}
2. Starting at 0 V, adjust V_{REF} for target I_{CC}

To turn-off:

1. Set V_{REF} to 0 V
2. Set V_{CC} to 0 V

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.
