| Absolute Maximum Channel Temperature                 | +250°C           |  |  |

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation above maximum operating conditions.

- Operating at drain source voltage  $V_{DS} < 55$  V will ensure MTTF > 1 x 10<sup>7</sup> hours.

  Operating at nominal conditions with  $T_{CH} \le 225^{\circ}$ C will ensure MTTF > 1 x 10<sup>7</sup> hours.

  MTTF may be estimated by the expression MTTF (hours) = A e [B + C/(T+273)] where *T* is the channel temperature in degrees Celsius, A = 3.686, B = -35.00, and C = 25,416.

#### Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

Gallium Nitride Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1C, CDM Class C3 devices.
