#### **Description**

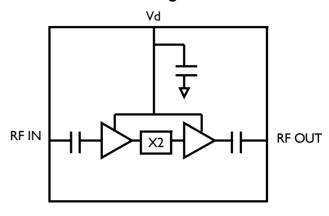

M/A-COM Tech's 13.5-17.0 / 27.0-34.0 GHz GaAs MMIC doubler integrates a gain stage, passive doubler and driver amplifier onto a single device. The XX1007-BD has a self-biased architecture requiring a single positive supply (+5V) only and integrated on-chip bypassing capacitor eliminating the need for external capacitor. This MMIC uses M/A Tech's GaAs PHEMT device model technology, and is based upon electron beam lithography to ensure high repeatability and uniformity. The chip has integrated ESD structures for protection and surface passivation to protect and provide a rugged part with backside via holes and gold metallization to allow either a conductive epoxy or eutectic solder die attach process. This device is well suited for Millimeter wave Point-to-Point Radio. LMDS, SATCOM and VSAT applications.

### **Handling Procedures**

Please observe the following precautions to avoid damage:

## **Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 2 devices.
